OBJECTIVE

Data-driven Cloud Engineer with hands-on experience in Python, SQL, and AWS, transitioning into a Data Engineering role to design scalable pipelines and leverage data for meaningful, real-world impact.

SKILLS

Programming Languages: Python, SQL, Go, JavaScript, Bash, Powershell, Java, C++, C, R, HTML, CSS

Tools and Platforms: Pandas, Jenkins, Tableau, Terraform, MySQL, Microsoft Azure, Amazon Web Services (AWS), AWS SDK, Ansible, Apache Spark, Apache Hadoop, Numpy, Matplotlib, Datadog, Jira, Github

PROFESSIONAL EXPERIENCE

Cloud Engineer, Technology, Citizens Bank

July 2023 – June 2026

- **Data Engineering:** Built **data pipeline using Boto3 and Pandas** that reduced AWS governance reporting from **8 hours of manual work to 1 hour automated**, enabling **weekly compliance audits** across **5,000+ cloud instances**. Provided **accurate infrastructure data to leadership and application teams**, empowering them to prioritize instance upgrades and remediate misconfigurations. Data-driven visibility and improved infrastructure directly enabled the organization to **leverage more advanced AI capabilities** across cloud operations.
- **Cloud Governance & Analytics:** Leveraged **Datadog and ServiceNow** to identify and remediate misconfigured tags across enterprise applications, strengthening cloud asset compliance and governance through data-driven insights.

Research Assistant, MAPLE Lab, WPI

Aug 2019 – Jan 2022

- Designed **experimental conditions and learning materials** to onboard teachers in the use of innovative Graspable Math technology, establishing controlled testing environments for a large-scale efficacy study.
- Analyzed data from **NSF-funded efficacy study of 3,000+ students**, generating insights that informed lab automation and advanced technology-enhanced learning research.

Summer Research Assistant, Society Technology and Policy Department, WPI

May 2021 – Aug 2021

- Conducted **statistical analysis of 1,000+ survey responses** on European immigration policy using **R Studio**, uncovering **data-driven evidence of systemic racism and discrimination patterns** across countries. Analysis and visualizations directly informed **peer-reviewed publication on government and international politics**, providing **quantitative findings** to support **policy recommendations** on immigration equity.
-

PROJECTS

Regulating Human Emotional State (MQP), WPI

Aug 2022 – May 2023

- Built **ETL pipeline in Python** connecting **multiple data sources (EEG, video, Fitbit, surveys)** for stress response research on environmental factors. Implemented **IRB-compliant depersonalization** and architected **reusable framework** enabling future research iterations.
 - Led **programming sub-team** to design the data infrastructure foundation, establishing standards for data synchronization and quality that subsequent CS teams built upon across multiple experimental cycles.
-

EDUCATION

Worcester Polytechnic Institute (WPI)

Bachelor of Science in Computer Science (May 2023)
